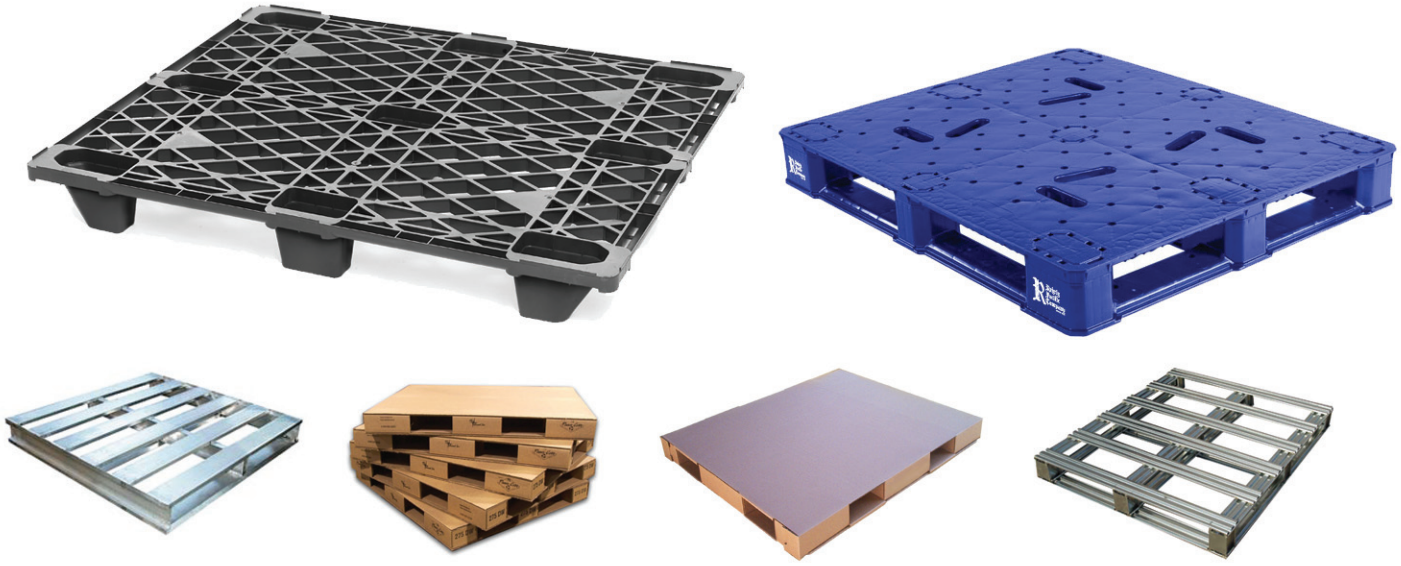
Winter 2014

Guide for Locating and Using Alternatives to Wooden Pallet

Special Report:



By the staff of **PALLET ENTERPRISE**

Guide for Locating and Using Alternatives to Wooden Pallet

1… Basics of Alternative Materials

2… Procurement Strategies

3… Alternative Pallet Guide:

A grid showcasing a wide range of pallets made of plastic and other alternative materials.

1. Basics of Alternative Materials

Pallets made from alternative (non-wooden) materials run the gamut from single-use pallets that cost only a few dollars to highly-engineered, custom pallets that cost a couple thousand dollars.

The grid supplied is a quick guide to the variety of companies that offer pallets made from alternative materials available on the market today. This guide is gathered from surveys completed by participating companies and publicly available information.

Included in the Alternative Material Pallets Guide are pallets made from plastic, aluminum, corrugated, steel, metal and composites. Plastic pallets are available from the highest number of companies (64%) and plastics are also the most popular material for companies that provide pallets made from only one material. There are many different designs and molding technologies used for plastic pallets.

Some pallets are constructed out of a single piece of plastic while others may be two or more pieces that are fastened or locked together. Thermoformed and injection molded plastic pallets are available with various features, such as coatings or designs to increase slip resistance, features for containing spills, and more.

Some plastic pallets also feature metal reinforcements. In addition, some companies manufacture plastic material by extruding profiles that can be cut or sawn like lumber and assembled in similar fashion as wood pallets; the use of 'plastic lumber' more readily enables the manufacture of pallets in custom sizes.

Corrugated pallets are a distant second material with only a quarter of the companies represented in the guide offering them. Of the companies that provide only one type of pallets, only six of them were not either plastic or corrugated.

Available styles include block-style, stringer pallets, two-way and four-way entry, the GMA footprint, and many custom styles. A majority of companies offer pallets that can nest, rack or both. Dynamic strength of up to 50,000 pounds is available from some companies while the pallets themselves range in weight from three to 300 pounds. Reported prices start at only $4, but can go shockingly higher for some custom applications.

With increasing regulation of export pallets, many alternative material pallet companies market their pallets as export ready as they are not constrained by the treatment requirements that wooden pallets must meet. A few companies focus primarily on export pallets and at least 78% offer export or expendable pallets.

Advances in technology have made retooling machineries faster and more affordable, leading to an increase in the availability of customized pallets in the past few years. At least 44% of the companies in the guide offer custom-ization of some sort on their pallets. For at least 16% of the companies, customized pallet designs are one of the primary styles offered. Although most companies still provide standard pallet styles, several companies solely manufacture custom pallets.

2. Procurement Strategies

When it comes to obtaining plastic, corrugated, metal or composite pallets, there are number of methods and financial arrangements that can be done depending on the situation.

Some companies offer lease or rental options. Others can help customers setup retrieval networks or manage assets. You have to remember that the purchase price may be much higher than a typical wooden pallet. But when you consider the cost per trip, using alternatives can make good financial sense.

Calculating Your Costs

Your vendor should be able to help you come up with a calculation for the total cost per trip. You need to make sure that the following variables are considered: cost of the pallet, the number of trips before repair, the return ratio, the weight of the pallet, any financing or interest cost, your current system cost, and return freight from key distribution points. You will also want to estimate the cost to handle, clean, sort and repair returned packaging. Your vendor should be able to give you some benchmarks to use in doing your analysis based on the real-world experience of other customers.

Key Questions to Ask

1.) Is this for an export application?

2.) Will the pallet be used in a closed loop environment?

3.) What is the float? This is the amount of packaging needed to supply customer demand.

4.) Does it make sense to return these pallets? Examine return freight costs per trailer for various delivery points. Return may make sense for some locations and not for others.

5.) What are historic damage and loss rates for your supply chain? What are the typical repair costs?

6.) What will be stored on the pallet and what weight load requirements need to be met?

7.) What size pallet is required? Style? – Nestable, block or stringer design?

8.) What features are needed? Color?

9.) How will the pallets be managed? Is tracking needed?

10.) Are you looking to purchase, finance, or rent/lease the pallets?

11.) What hidden costs/benefits exist? This could include product damage, automation productivity, employee injury, sanitation and export concerns.

12.) How much does your company spend on all unit load packaging costs per year? This includes stretch wrap, corrugated boxes, pallets, etc.? You may be able to save the company a lot more by improving the pallet design when you consider corrugated costs and other areas. You should look at the unit load as a complete system and not just the individual component parts.

Options:

1.) Outright purchase

2.) Lease

3.) Rental

3. Alternative Pallet Guide

Company Name	Unique Features
21st Century Plastics Corp.	DuraLite Pallets from 21st Century Plastics are made from post-industrial recycled plastics.
ALX Engineered Structures	ALX pallet technology received the global Green Flame Award. Pallets can be designed to meet all regulatory requirements for fire, sanitation, and OSHA.
Allied Plastics, Inc.	Allied Plastics manufactures plastic thermoformed pallets in multiple sizes and styles including customized.
AplusPallets	Lightweight 100% recyclable aluminum pallets in custom sizes are available. Aplus is now offering stainless steel pallets.
A.S.A.P. Inc.	A.S.A.P. pallets, skids and crates are modular in design which allows them to be built in any size with no tooling charges. Also offers crates and bins.
Bayhead Products	Bayhead Products offers many styles of rotationally molded plastic pallets.
Buckeye Diamond Logistics	Buckeye Diamond offers many varieties of standard pallets as well as custom-designed pallets.
Buckhorn Inc.	Buckhorn's reusable plastic pallet line includes a variety of pallets for light to heavy-duty demands in multiple sizes, weights and styles.
